## WORK EXPERIENCE AND PROJECTS

**figame.com**                                                                          December 2018 - Present

*Full Stack Web Developer*

· Developed and maintained a B2C corporate travel agency website ( Online Booking Tool ). Implemented various services including flight bookings via Sabre GDS, TravelFusion and NDC and a state of the art hotel booking engine via the Expedia EPS V3 API enhancing user experience and operational efficiency. Collaborated and managed cross-functional teams and delivered high-quality features and improvements. Some projects include:

- app.figame.com - Online Booking Tool

  - Provided flight booking services featuring availability checks, pricing, booking, and ticket issuance through a simple and user-friendly interface.

  - Developed a hotel booking engine integrating content from the Expedia EPS V3 API with a custom RESTful API. Utilized MongoDB and wrote complex geospatial queries to ensure high performance and fast response times.

  - Fully featured and extensible implementation of car rental services through the carnect and Avance API including a cloud service for image caching.

  - Created a dynamic package pricing & booking RESTful API for providing services as a package ( bundled tickets and combination of services ).

  - Implemented the Liknoss API to include ferry ticket bookings. Created a separate cloud service to combine tickets from different carriers.

  - Train tickets booking engine for EU rail companies via the TravelFusion API ( includes Bene, Thalys, Eurostar etc ).

  - Airport lounge booking engine.

  - Payment gateways ( redirect ) - Alphabank, Piraeus, Ecommpay, Six, Viva.

  - Managed a team of 5 to enhance the provided services and user experience.

- figamegroup.com - A wordpress website and landing page for the Online Booking Tool, app.figame.com
- figame.gr - Online Travel Agency
  - Dynamic pricing for meta-search engines such as SkyScanner, Momondo and Google Flights
- expenses.figame.com - Expense Management Software
  - Created a backend service in Laravel for an Expense Management Software including authorization & authentication middlewares.
  - Managed and directed a team for creating a simple and responsive user interface in React using Tailwind CSS.
- Android App and iOS App — 'figame.com - Business Travel'
  - Built with react native framework
- Other projects
  - figamehotels.com, figamecars.com, figamelounges.com, ferrywell.gr
- Depricated projects
  - figametickets.com, figameradio.com, zitaflights.com, corporatefigame.com
  - ( Partnership with easygroup ) - easyair.com, easyfly.co.uk, easysky.co.uk, easyflights.co.uk, easycorporatetrips.com

**kongkika.gr**                                                                                     Personal Projects

· My CV on a web format ( kongkika.gr )
· Experimenting with bootstrap 5, created airports.kongkika.gr, an airport API that
· A covid-19 tracking. Experimentation with p5.js by creating a covid-19 spreading simulation. ( covid-19.kongkika.gr )
· Working on travelotool.kongkika.gr - A metasearch engine for flight booking like skyscanner.
· Experimenting with bootstraps latest version. ( unipi.kongkika.gr )

## GOALS

I'm open in new ideas, suggestions and opinions. My goal is to learn more about Android and iOS development and get to work with new technologies.
